TITLE : HOLE PLATE FOR GOLF PUTTER
PRACTICE

ABSTRACT : PROBLEM TO BE SOLVED: To easily enable the practice of a golf putter by placing a board at the time of golf putter practice, and by peeling off the released paper at the adhesive hole part for forming an adhesive hole.

SOLUTION: A released paper sheet 2 having a hard smooth surface is stuck on the surface of a board 1 to which an acrylic pressure sensitive adhesive has been applied. In the central part of the released paper sheet 2, a circle having the same diameter of a golf hole is cut off to form a hole released paper sheet 3. An adhesive hole 4 having adhesiveness is made up by peeling off the hole released paper sheet 3. The adhesive force of the adhesive hole 4 is determined in such a degree that a golf ball 5 that has been actually putted does not run over the cup and the golf ball 5 having kinetic energy can be stopped inside the cup by the adhesion. Without wholly sticking the released paper sheet on the board 1, a pressure sensitive adhesive may be applied to the central part of the board 1 so as to have the same diameter as the hole, and covered with the hole released paper sheet 3.
